

***ROTARY DEVELOPES THE
FIELD***

Description

- The recovery of forests is the main action to mitigate climate change. Restoration reduces CO2 emissions. Reforestation in our region due to the tropical climate is valuable for cheap carbon sequestration since the establishment costs are low and the tree growth rate is high. Colombia lost 6.7 million hectares of forest in the last 30 years due to deforestation. The program encourages population immersed in deforested areas, natural parks, and areas surrounding special environmental management to establish productive systems through economic support, supplies, raw materials and technical assistance. Direct beneficiaries 100 families linked to the project.

Area of focus

○ Meta, Colombia

Clubs participating or other entities

- DISTRICT 4271
- LOCAL CLUB
- PARTNER CLUB
- ROTARY FOUNDATION
- DISTRICT INTERNATIONAL
