DISTRITO 4380

## **“ Rotary hemodynamics face-to-face training ”**

### **Project description:**

The Rotary Club of Valencia, in alliance with the Coordination of the Postgraduate degree in Interventional Cardiology of *Hospital Central de Valencia*, come together to **develop the program "Rotary hemodynamics face-to-face training" for postgraduate cardiology medical students interventionist**, led by Dr. Miguel Lopez and his team. This will be carried out in the hemodynamics unit of the *Instituto de Especialidades Quirurgicas*, for which it is necessary to **provide the unit with specialized material (catheters and stents)**. Low-income patients, mainly those from the nearby community, will benefit from this program by receiving free catheterization and angioplasty interventions.

**Project localization:** Valencia City, San José Municipality.

**Project timeline**, expected start at January 18th 2021 and end date January 31 of 2022.

## Focus área:

Prevention and treatment  
of diseases.

Literacy and basic education

Total cost of the project : **250.000 \$**

Universities in Venezuela have lost the ability to support their educational programs. The postgraduate degree in interventional cardiology requires face-to-face training that cannot be developed in Public Hospitals, which do not have the minimum resources for their basic activities. In fact, no public hospital in the central area of the country has a hemodynamic room. Hence, the need to contribute to a strategic alliance that allows to sustain the face-to-face activities of the postgraduate interventional cardiology at the University of Carabobo.

Cardiovascular diseases are the leading cause of morbidity and mortality in the world.

The education and training of health personnel is a guarantee to be able to put knowledge at the service of those who need it most. The knowledge does not have an expiration date ...
